

Agenda

- 1) Nearest smaller on left
- 2) Other variations
- 3) Largest area histogram *
- 4) sum of Max-min (tough) {remaining}

Q.1 Given $A[]$, find nearest smaller on left for every element.
↳ distance

$A = [8 \ 2 \ 4 \ 9 \ 10 \ 5 \ 3 \ 12]$
 0 1 2 3 4 5 6 7

$ans = [-1 \ -1 \ 2 \ 4 \ 9 \ 4 \ 2 \ 3]$

$A = [8 \ 2 \ 9 \ 4 \ 0 \ 5 \ 3]$
 0 1 2 3 4 5 6

$ans = [-1 \ -1 \ 2 \ 2 \ -1 \ 0 \ 0]$

i) Brute force idea: for every element, travel left side unless we get smaller than $A[i]$.

TC: $O(N^2)$, SC: $O(1)$

```
ans = new int[n];
```

```
Arrays.fill(ans, -1);
```

```
for (i=0; i<n; i++) {
```

```
    for (j=i-1; j>=0; j--) {
```

```
        if (A[j] < A[i]) {
```

```
            ans[i] = A[j];
```

```
        } break;
```

```
    }
```

```
}
```

A = [2 4 1 7]
 0 1 2 3

ans = [-1 2 -1 1]

Expected TC: $O(n)$

A = [8 2 4 4 1 5 3 12]
 0 1 2 3 4 5 6 7

ans = [-1 -1 2 4 -1 1 1 3]

for every ele:

1) pop value $\geq A[i]$

2) if $st.size() == 0$

$ans[i] = -1$

else

$ans[i] = st.peek()$

3) $st.push(A[i])$

```
int[] nextSmallerOnLeft (int[] A) {
```

```
    int n = A.length;
```

```
    Stack<Integer> st = new Stack<>();
```

```
    int[] nsol = new int[n]; // nsol: next smaller on left
```

```
    for (int i=0; i<n; i++) {
```

```
        while (st.size() > 0 && st.peek() >= A[i]) {
```

```
            st.pop();
```

```
        }
```

```
        if (st.size() == 0) {
```

```
            nsol[i] = -1;
```

```
        }
```

```
        else {
```

```
            nsol[i] = st.peek();
```

```
        }
```

```
        st.push(A[i]);
```

```
    }
```

```
    return nsol;
```

```
}
```

n pushes
n pop

TC: $O(n)$

SC: $O(n)$

```
for (int i=0; i<n; i++) {
```

```
    while (st.size() > 0 && st.peek() >= A[i]) {
        st.pop();
```

```
    }
```

```
    if (st.size() == 0) {
```

```
        nsol[i] = -1;
```

```
    }
```

```
    else {
```

```
        nsol[i] = st.peek();
```

```
    }
```

```
    st.push(A[i]);
```

```
}
```

↓

A = [2 1 4 5 3]
 0 1 2 3 4
 nsol = [-1 -1 1 4 1]

↓

	5	4	3	2	1
nsol:	-1	-1	-1	-1	-1
its:	1	1	1	1	1
		1	1	1	1

↓

	2	3	4	5	1
nsol:	-1	2	3	4	-1
its:	1	1	1	1	4
					1

todo: some more eg.

Q.2 Given A[], find index of nearest smaller on left for every element.

A = [8 2 4 9 7 5 3 10]
 0 1 2 3 4 5 6 7

nsol = [-1 -1 1 2 2 2 1 6]

```
int[] nextSmallerOnLeft (int[] A) {
```

```
    int n = A.length;
```

```
    Stack<Integer> st = new Stack<>();
```

```
    int[] nsol = new int[n]; // nsol: next smaller on left
```

```
    for (int i=0; i<n; i++) {
```

```
        while (st.size() > 0 && A[st.peek()] >= A[i]) {
```

```
            st.pop();
```

```
        }
```

```
        if (st.size() == 0) {
```

```
            nsol[i] = -1;
```

```
        }
```

```
        else {
```

```
            nsol[i] = st.peek();
```

```
        }
```

```
        st.push(i);
```

```
    }
```

```
    return nsol;
```

```
}
```

A = [2 4 3]
 0 1 2

nsol = -1 0 0

Other variations

→ nearest smaller on left ✓

→ Index of nearest smaller on left ✓

→ nearest smaller on right → run from $i: n-1$ to 0

→ Index of nearest smaller on right → run from $i: n-1$ to 0

→ nearest greater on left

→ Index of nearest greater on left

→ nearest greater on right

→ Index of nearest greater on right

} pop till stack has values
 $\leq A[i]$

$n-1$ to 0
↑
left / right → travel direction
↓
0 to $n-1$

pop content
on stack $\leq A[i]$
↑
smaller / greater → condition
↓
pop content
on stack $\geq A[i]$

Q.3 Largest area histogram *

Return the area of
largest rectangle possible?

$A = [2 \ 1 \ 5 \ 6 \ 2 \ 3]$

$$\text{area} = h * w$$

$$\text{ans} = 10 \ (5 * 2)$$

$A = [2 \ 1 \ 3 \ 6 \ 2 \ 4]$

$$\text{ans} = 8$$

$$A = [2 \ 1 \ 5 \ 6 \ 4 \ 1]$$

$$A = [2 \ 1 \ 5 \ 6 \ 2 \ 3]$$

nsol	-1	-1	1	2	1	4
nsor	1	6	4	4	6	6
h	2	1	5	6	2	3
w	1	6	2	1	4	1
area	2	6	10	6	8	3

$$h = A[i]$$

$$w = nsor[i] - nsol[i] - 1$$

ub: nearest smaller
on left.

rb: nearest smaller
on right.

if nsol does not exists
→ -1

if nsor does not exists
→ n

code:

```
public class Solution {  
  
    int[] nextSmallerLeft(int[] A) {  
        int n = A.length;  
        int[] nsol = new int[n];  
        Stack<Integer> st = new Stack<>();  
  
        for(int i=0; i < n; i++) {  
            while(st.size() > 0 && A[st.peek()] >= A[i]) {

    }  
}
```

itr: $3n$

TC: $O(n)$

total space: $2n$

SC: $O(n)$

Doubts

```
char ch1 = 'a';  
char ch2 = '$';
```

} `ch1 == ch2`

```
String s1 = "Nasrin";  
String s2 = "Manisha";
```

} `s1 == s2` X
↳ `s1.equals(s2)`

Q-4 Given $A[]$, find sum of all $(\max - \min)$ for all subarrays.

$A =$

2	5	3
0	1	2

s	e	subarray	(max-min)
0	0	[2]	
0	1	[2 5]	
0	2	[2 5 3]	
1	1	[5]	
1	2	[5 3]	
2	2	[3]	

→ In how many subarrays 5 is max?

A =

2	13	8	4	1	5	3	6	2	7
0	1	2	3	4	5	6	7	8	9

→ In how many subarrays 6 is max?

A =

2	13	8	4	1	5	3	6	2	7
0	1	2	3	4	5	6	7	8	9

→ In how many subarrays 2 is min?

A =

5	8	1	4	2	5	3	-6	10	7
0	1	2	3	4	5	6	7	8	9
